

NAG Fortran Library Routine Document

F04LHF

Note: before using this routine, please read the Users' Note for your implementation to check the interpretation of ***bold italicised*** terms and other implementation-dependent details.

1 Purpose

F04LHF calculates the approximate solution of a set of real linear equations with multiple right-hand sides, $AX = B$ or $A^T X = B$, where A is an almost block-diagonal matrix which has been factorized by F01LHF.

2 Specification

```
SUBROUTINE F04LHF(TRANS, N, NBLOKS, BLKSTR, A, LENA, PIVOT, B, LDB, IR,
1                      IFAIL)
1      INTEGER          N, NBLOKS, BLKSTR(3,NBLOKS), LENA, PIVOT(N), LDB, IR,
1      real             A(LENA), B(LDB,IR)
CHARACTER*1           TRANS
```

3 Description

The routine solves a set of real linear equations $AX = B$ or $A^T X = B$, where A is almost block-diagonal. A must first be factorized by F01LHF. F04LHF then computes X by forward and backward substitution over the blocks.

4 References

5 Parameters

- | | |
|--|--------------|
| 1: TRANS – CHARACTER*1 | <i>Input</i> |
| <p><i>On entry:</i> TRANS specifies the equations to be solved as follows:</p> <ul style="list-style-type: none"> if TRANS = 'N', solve $AX = B$; if TRANS = 'T', solve $A^T X = B$. | |
| 2: N – INTEGER | <i>Input</i> |
| <p><i>On entry:</i> n, the order of the matrix A.</p> <p><i>Constraint:</i> $N > 0$.</p> | |
| 3: NBLOKS – INTEGER | <i>Input</i> |
| <p><i>On entry:</i> the total number of blocks of the matrix A, as supplied to F01LHF.</p> <p><i>Constraint:</i> $0 < NBLOKS \leq N$.</p> | |
| 4: BLKSTR(3,NBLOKS) – INTEGER array | <i>Input</i> |
| <p><i>On entry:</i> information which describes the block structure of A, as supplied to F01LHF.</p> | |

5:	A(LENA) – <i>real</i> array	<i>Input</i>
<i>On entry:</i> the elements in the factorization of A , as returned by F01LHF.		
6:	LENA – INTEGER	<i>Input</i>
<i>On entry:</i> the dimension of the array A as declared in the (sub)program from which F04LHF is called.		
<i>Constraint:</i> $\text{LENA} \geq \sum_{k=1}^{\text{NBLOKS}} \text{BLKSTR}(1, k) \times \text{BLKSTR}(2, k)$.		
7:	PIVOT(N) – INTEGER array	<i>Input</i>
<i>On entry:</i> details of the interchanges in the factorization, as returned by F01LHF.		
8:	B(LDB,IR) – <i>real</i> array	<i>Input/Output</i>
<i>On entry:</i> the n by r right-hand side matrix B .		
<i>On exit:</i> B is overwritten by the n by r solution matrix X .		
9:	LDB – INTEGER	<i>Input</i>
<i>On entry:</i> the first dimension of the array B as declared in the (sub)program from which F04LHF is called.		
<i>Constraint:</i> $\text{LDB} \geq \text{N}$.		
10:	IR – INTEGER	<i>Input</i>
<i>On entry:</i> r , the number of right-hand sides.		
<i>Constraint:</i> $\text{IR} > 0$.		
11:	IFAIL – INTEGER	<i>Input/Output</i>
<i>On entry:</i> IFAIL must be set to 0, -1 or 1. Users who are unfamiliar with this parameter should refer to Chapter P01 for details.		
<i>On exit:</i> IFAIL = 0 unless the routine detects an error (see Section 6).		

For environments where it might be inappropriate to halt program execution when an error is detected, the value -1 or 1 is recommended. If the output of error messages is undesirable, then the value 1 is recommended. Otherwise, for users not familiar with this parameter the recommended value is 0. **When the value -1 or 1 is used it is essential to test the value of IFAIL on exit.**

6 Error Indicators and Warnings

If on entry IFAIL = 0 or -1 , explanatory error messages are output on the current error message unit (as defined by X04AAF).

Errors or warnings detected by the routine:

IFAIL = 1

On entry, $\text{N} < 1$,
 or $\text{NBLOKS} < 1$,
 or $\text{IR} < 1$,
 or $\text{LDB} < \text{N}$,
 or $\text{N} < \text{NBLOKS}$,
 or LENA is too small,
 or illegal values detected in BLKSTR,
 or $\text{TRANS} \neq \text{'N'}$ or 'T' .

7 Accuracy

The accuracy of the computed solution depends on the conditioning of the original matrix A .

8 Further Comments

None.

9 Example

To solve the set of linear equations $Ax = b$ where

$$A = \begin{pmatrix} -1.00 & -0.98 & -0.79 & -0.15 \\ -1.00 & -0.25 & -0.87 & 0.35 \\ 0.78 & 0.31 & -0.85 & 0.89 \\ -0.82 & 0.12 & -0.01 & 0.75 \\ -0.83 & -0.98 & -0.58 & 0.04 \\ -0.21 & -0.93 & -0.84 & 0.37 \\ -0.99 & -0.91 & -0.28 & 0.90 \\ -0.87 & -0.14 & -1.00 & -0.59 \\ -0.93 & -0.91 & 0.10 & -0.89 \\ 0.85 & -0.39 & 0.79 & -0.71 \\ 0.17 & -1.37 & 1.29 & -1.59 \end{pmatrix}$$

$$\begin{pmatrix} 0.78 & -0.69 & -0.98 & -0.76 \\ 0.32 & -1.00 & -0.53 & \\ 0.38 & -1.00 & -1.00 & \\ -0.94 & -0.96 & -1.00 & \\ -0.99 & -0.91 & -0.28 & 0.90 \\ -0.87 & -0.14 & -1.00 & -0.59 \\ -0.93 & -0.91 & 0.10 & -0.89 \\ 0.39 & -0.99 & -0.12 & -0.75 \\ 1.10 & -1.63 & -1.01 & -0.27 \\ 0.08 & 0.61 & 0.54 & -0.41 \\ -0.67 & 0.56 & -0.99 & 0.16 \\ -0.24 & -0.41 & 0.40 & -0.93 \\ 0.70 & 0.43 & 0.71 & -0.97 \\ -0.47 & -0.98 & -0.73 & 0.07 \\ -0.25 & -0.92 & -0.52 & -0.46 \\ 0.89 & -0.94 & -0.54 & -1.00 \\ & & & -0.36 \end{pmatrix}$$

and

$$b = \begin{pmatrix} -2.92 \\ -1.17 \\ -1.30 \\ -1.17 \\ -2.10 \\ -4.51 \\ -1.71 \\ -4.59 \\ -4.19 \\ -0.93 \\ -3.31 \\ 0.52 \\ -0.12 \\ -0.05 \\ -0.98 \\ -2.07 \\ -2.73 \\ -1.95 \end{pmatrix}$$

The exact solution is

$$x = (1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1)^T.$$
