

# NAG Fortran Library Routine Document

## **F06FUF**

**Note:** before using this routine, please read the Users' Note for your implementation to check the interpretation of ***bold italicised*** terms and other implementation-dependent details.

### 1 Purpose

F06FUF applies a real elementary reflection (Householder matrix)  $P$ , as generated by F06FSF, to a given real vector:

$$\begin{pmatrix} \alpha \\ x \end{pmatrix} \leftarrow P \begin{pmatrix} \alpha \\ x \end{pmatrix}$$

where  $x$  is an  $n$  element real vector and  $\alpha$  a real scalar.

### 2 Specification

```
SUBROUTINE F06FUF (N, Z, INCZ, Z1, ALPHA, X, INCX)
INTEGER N, INCZ, INCX
double precision Z(*), Z1, ALPHA, X(*)
```

### 3 Description

None.

### 4 References

None.

### 5 Parameters

- |  |                     |
|--|---------------------|
| 1: N – INTEGER   | <i>Input</i>        |
| On entry: $n$ , the number of elements in $x$ and $z$ .  |                     |
| 2: Z(*) – <b>double precision</b> array  | <i>Input</i>        |
| On entry: the vector $z$ , as returned by F06FSF.  |                     |
| 3: INCZ – INTEGER  | <i>Input</i>        |
| On entry: the increment in the subscripts of $Z$ between successive elements of $z$ .  |                     |
| 4: Z1 – <b>double precision</b>  | <i>Input</i>        |
| On entry: the scalar $\zeta$ , as returned by F06FSF. If $\zeta = 0$ , $P$ is assumed to be the unit matrix and the transformation is skipped. |                     |
| 5: ALPHA – <b>double precision</b>   | <i>Input/Output</i> |
| On entry: the original scalar $\alpha$ .   |                     |
| On exit: the transformed scalar $\alpha$ .   |                     |
| 6: X(*) – <b>double precision</b> array  | <i>Input/Output</i> |
| On entry: the original vector $x$ .  |                     |
| On exit: the transformed vector $x$ .  |                     |

7: INCX – INTEGER

*Input*

*On entry:* the increment in the subscripts of X between successive elements of  $x$ .

## 6 Error Indicators and Warnings

None.
