F06PPF (DSYR)

Note: before using this routine, please read the Users' Note for your implementation to check the interpretation of ***bold italicised*** terms and other implementation-dependent details.

1 Purpose

F06PPF (DSYR) performs the symmetric rank-1 update operation

$$A \leftarrow \alpha xx^T + A,$$

where A is an n by n real symmetric matrix, x is an n element real vector, and α is a real scalar.

2 Specification

```
SUBROUTINE F06PPF (UPLO, N, ALPHA, X, INCX, A, LDA)
INTEGER N, INCX, LDA
double precision ALPHA, X(*), A(LDA,*)
CHARACTER*1 UPLO
```

The routine may be called by its BLAS name *dsyr*.

3 Description

None.

4 References

None.

5 Parameters

- | | |
|---|--------------|
| 1: UPLO – CHARACTER*1 | <i>Input</i> |
| <p><i>On entry:</i> specifies whether the upper or lower triangular part of A is stored as follows:</p> <p>if UPLO = 'U', the upper triangular part of A is stored;
 if UPLO = 'L', the lower triangular part of A is stored.</p> <p><i>Constraint:</i> UPLO = 'U' or 'L'.</p> | |
| 2: N – INTEGER | <i>Input</i> |
| <p><i>On entry:</i> n, the order of the matrix A.</p> <p><i>Constraint:</i> $N \geq 0$.</p> | |
| 3: ALPHA – double precision | <i>Input</i> |
| <p><i>On entry:</i> the scalar α.</p> | |
| 4: X(*) – double precision array | <i>Input</i> |
| <p><i>On entry:</i> the vector x.</p> | |
| 5: INCX – INTEGER | <i>Input</i> |
| <p><i>On entry:</i> the increment in the subscripts of X between successive elements of x.</p> <p><i>Constraint:</i> $INCX \neq 0$.</p> | |

6: $A(LDA,*)$ – **double precision** array *Input/Output*

Note: the second dimension of the array A must be at least $\max(1, N)$.

On entry: the n by n symmetric matrix A . If $\text{UPLO} = \text{'U'}$, the upper triangle of A must be stored and the elements of the array below the diagonal are not referenced; if $\text{UPLO} = \text{'L'}$, the lower triangle of A must be stored and the elements of the array above the diagonal are not referenced.

On exit: the updated matrix A .

7: LDA – INTEGER *Input*

On entry: the first dimension of the array A as declared in the (sub)program from which F06PPF (DSYR) is called.

Constraint: $LDA \geq \max(1, N)$.

6 Error Indicators and Warnings

None.
